

# Choosing the Right Delivery Approach

There's no one-size-fits-all. Choose what fits your goal, timeline, risk, and team.

## START HERE

What's your priority?

## KEY CONSIDERATIONS

### GOALS & OUTCOMES

What are you trying to achieve?

### REQUIREMENTS CLARITY

Are they clear, or still evolving?

### TIME & SPEED

Do you need it fast or at a steady pace?

### RISK & UNCERTAINTY

How much risk can you tolerate?

### TEAM & CAPABILITIES

What does your team need to succeed?

### COMPLEXITY

Are there many unknowns, integrations, or moving parts?

### BOTTOM LINE:

The right delivery approach helps you deliver value, manage risk, and achieve better outcomes.

**Don't choose Agile vs Waterfall first.**  
**First understand complexity – then design your delivery.**
